

Viral Nayi

✉ viralnayi8@gmail.com | ☎ +91 95103 86519 | 📍 Mehsana, Gujarat, India

Passionate undergraduate focused on Data Science and Statistical Modeling. Leveraging a strong background in DSA to optimize machine learning workflows and improve model efficiency. Skilled in Python-based data analysis and SQL, with hands-on experience in extracting insights from complex datasets to drive data-informed decision-making.

Education

Parul University

B.Tech. (Undergrad), Computer Science and Engineering | GPA: 8.34

Vadodara, Gujarat, India

02/2027

Skills

Skills: Data analysis, Data science, Machine learning

Languages: Python, SQL, Java, JavaScript, C

Data Science Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TensorFlow, PyTorch, Flask

Development Tools: Jupyter Notebook, VS Code, GitHub, AWS, Tableau, Power BI, Excel

Mathematics & Statistics:

Hypothesis Testing, Correlation, Regression, Probability & Statistics, Linear Algebra, Calculus, Statistical analysis

Soft Skills:

Cultural awareness, Writing skills, Strategic planning, Public speaking, Analytical skills, Presentation skills, Project management, Critical thinking, Problem-solving

Projects

LSTM based Stock Price Predictor

Solo project | Python | TensorFlow | Keras | Streamlit | VADER NLP

- Developed an end-to-end stock price forecasting application using a 3-layer LSTM neural network (150 units) trained on 7 engineered sequential features including Close, Volume, RSI, MACD, and SMA.
- Engineered a real-time sentiment analysis pipeline using VADER NLP to quantify bullish/bearish signals from live financial headlines via NewsAPI with Google News RSS fallback.
- Achieved an R^2 score of 0.95+, Mean Absolute Percentage Error under 5%, and Directional Accuracy exceeding 55% on continuous validation sets.

Lumea : AI - Mental Health Companion

Group Project | Next.js 16 | React 19 | Groq (Llama 3.3 70B) | Hugging Face | Supabase

- Together engineered a full-stack AI mental wellness platform featuring real-time streaming empathetic chat (Llama 3.3 70B via Groq), NLP-based emotion detection using DistilRoBERTa, CBT cognitive distortion analysis, mood tracking, and guided breathing exercises.
- Implemented a multi-layered safety system with 100+ distress phrase interception, API rate-limiting, and end-to-end user data isolation via Supabase Row-Level Security.
- Designed a responsive glassmorphism UI with 5 switchable themes, achieving sub-second streaming responses and seamless real-time chat interactions across devices.
